<b>Excercise 1.</b> For the function $f(x): \mathbb{R}^n \to \mathbb{R}^m$ , please write down the zeroth-order Taylor expans with an integral remainder term.	ion
Solution of Excercise 1: bla.bla bla bla. bla.	
<b>Excercise 2.</b> Please write down the definition of the $p$ -norm for a $n$ -dimensional real vector.	
Solution of Excercise 2: bla.bla bla bla bla.	
<b>Excercise 3.</b> Please write down the definition of the matrix norms induced by vector $p$ -norms.	
Solution of Excercise 3: bla.bla bla bla. bla.	
<b>Excercise 4.</b> Let $A$ be an $n \times n$ symmetric matrix. Proof that $A$ is positive semidefinite if and o if all eigenvalues of $A$ are nonnegative. Moreover, $A$ is positive definite if and only if all eigenvalues $A$ are positive.	
Proof of Excercise 4: bla.bla bla bla bla
